

Exercise 25: Convoy Attack

Purpose:

Promote innovative problem-solving, communication, trust, and team-building

Time Required:

- 5 min set up
- 5 min intro
- 20 min execution
- 10 min debrief
- **40 min total**

Brief Outline:

- Following an insurgent attack on their convoy, participating flight members are given a variety of handicaps to simulate injuries sustained during the attack.
- Possible 'injuries' to flight members include: inability to see (blindfold), inability to speak, inability to use an arm or leg.
- The objective of the GLP is for all team members to navigate their way through roadside IEDs (represented by canteens, manuals, etc.) and make it to a friendly forward operating base within a 20-minute window before insurgents surround their position.
 - Cadets must work together to navigate, guide, and support each other through the IEDs.
- Every time a flight member comes in contact with an IED, the flight must restart the exercise and the FTO will impose appropriate penalties (additional wounded or dead flight members).
- Due to the continuing threat of insurgent attack, cadets able to speak may only do so at a volume no louder than a whisper, so as to not give away the flight's position.
- Once 20 minutes has elapsed, the exercise ends and debrief is conducted
- Note: The larger the area chosen to simulate the area of IEDs, the more complex and time-consuming the exercise becomes.

Debrief:

1. How far did the team get in reaching its objective?
2. How could it have been more successful?
3. What were some of the problems with trying to communicate and navigate through the IEDs?
4. Did one individual emerge as a leader?
5. How could the entire team working together promote success?
